

Kusumeshkant Sharma

Senior Flutter Developer · Cross-Platform iOS & Android

+91-8884133322 · kusumeshkantsharma@gmail.com · linkedin.com/in/kusumeshkantsharma/ · Bangalore · Open to Remote

PROFESSIONAL SUMMARY

Senior Flutter Developer with 5+ years delivering production-grade cross-platform iOS/Android apps — Clean Architecture, Riverpod, BLoC, GraphQL, and real-time integrations across fintech, fitness, and e-commerce. Owns the full mobile delivery cycle — architecture, API integration, code reviews and mentoring, through App Store and Play Store releases. Currently building Cockpit, a Flutter + Supabase app for approving AI-agent actions, as a personal project.

TECHNICAL SKILLS

Mobile	Flutter, Dart, FlutterFlow, Android Studio, Xcode (iOS)
State Mgmt	Riverpod, BLoC/Cubit, GetX, Provider, Redux
Architecture	Clean Architecture, MVVM, SOLID, Dependency Injection
APIs & Auth	REST APIs, GraphQL, OAuth 2.0, Dio (interceptor-level encryption), Firebase SDK
Cloud & CI/CD	Firebase (Auth, Firestore, FCM, Analytics), Supabase (Postgres, Auth, Edge Functions), AWS S3, GitHub Actions, CI/CD
AI & Agents	Anthropic SDK, Claude API (Sonnet/Haiku), Multi-Agent Orchestration, Langfuse, Inngest, Docker Compose, Prometheus, Grafana, Agentic coding tools (Claude Code)
Other	React.js, Node.js, Express.js, MongoDB · Figma, Postman, Jira, Confluence

PROFESSIONAL EXPERIENCE

Sr. Software Developer (Flutter) · *Apto Solutions* · *Chennai* Sept 2025 – March 2026

Selfe Loans — Equitas Small Finance Bank · Shipped on Play Store

- ▶ Architected Flutter app using Riverpod + MVVM with strict Clean Architecture layering, decoupling team responsibilities and accelerating feature delivery across 900+ branch integrations India-wide
- ▶ Engineered modular Dio-based API client with interceptor-level request/response encryption; integrated Firebase Analytics + Netcore for funnel tracking and push notification campaigns
- ▶ Implemented end-to-end user onboarding flows (KYC, document upload, real-time status tracking) and owned App Store + Play Store deployment pipeline

Sr. Software Developer (Flutter) · *Joola India Pvt. Ltd* · *Bangalore* Sept 2024 – Apr 2025

- ▶ Led Flutter development for 150+ Health (Play Store) — fitness app with smartwatch integration via Google Health Connect (Android) and Apple HealthKit (iOS) for automated activity sync
- ▶ Mentored junior developers on Clean Architecture and state management; conducted code reviews enforcing best practices across the mobile codebase
- ▶ Built Node.js / Express.js / MongoDB backend for analytics and content delivery; built the RacketPro trainer certification platform (racketpro.org) with Flutter + GetX

Software Developer · *Joulestowatts BS Pvt. Ltd* · *Bangalore* Nov 2023 – Apr 2024

- ▶ Delivered complete checkout module for EE e-commerce app (UK, Play Store) — cart, address, payment integration, order confirmation — using Flutter + BLoC + Clean Architecture
- ▶ Integrated GraphQL APIs with TDD documentation; applied SOLID principles across all feature modules for testability and maintainability

Software Developer · *StillsWeb* · *Mumbai* · *Remote* Feb 2022 – Oct 2023

- ▶ Developed and shipped Flutter applications including StillsWeb (cloud photo gallery) and Srajan AI (Flutter front end built from scratch) on Play Store; built Unsync — a real-time video/audio/text communication platform using Firebase + WebRTC
- ▶ Built scalable backend services using Node.js, Express.js, and MongoDB; integrated AWS S3 with role-based folder permissions (10GB/user) and Hive for offline-first persistence
- ▶ Developed responsive admin and web interfaces using React.js; delivered pixel-perfect Figma-to-Flutter UIs with optimized performance and clean architecture

- ▶ L1/L2 technical support for enterprise clients — diagnosed application and hardware issues, improving first-call resolution rates

KEY PROJECTS

Cockpit — AI Agent Approval Console — Founder · Personal Project · In Development, 2026

[Flutter](#) · [Dart](#) · [Riverpod](#) · [get_it/injectable](#) · [go_router](#) · [Supabase \(Postgres, Auth, Edge Functions\)](#) · [Firebase Cloud Messaging](#) · [HMAC](#)

- ▶ Architected a mobile-first, human-in-the-loop control app for AI agent automations (n8n / Make / Zapier / custom agents) — Flutter/Dart client with feature-first Clean Architecture, Riverpod state management, and typed `Either<Failure,T>` error handling
- ▶ Designed the Supabase backend: Postgres schema with row-level security and transactional Edge Functions (agents-create, actions-inbound, actions-decision) enforcing HMAC-signed inbound webhooks, pre-push persistence, and idempotent decision handling
- ▶ Built the end-to-end approval loop — signed webhook → FCM push → one-tap approve/edit/reject → authenticated callback to the originating agent — backed by an append-only audit trail with Realtime sync and polling fallback
- ▶ Currently wiring the Flutter client to the live Supabase stack (Auth, Realtime, Edge Functions), transitioning off demo datasources toward a testable end-to-end MVP

DQ AI Agent Orchestrator — Founder · Personal Project · 2026

[Node.js](#) · [TypeScript](#) · [Anthropic SDK](#) · [Claude API \(Sonnet 4.6 / Haiku 4.5\)](#) · [Langfuse](#) · [Inngest](#) · [Docker Compose](#) · [Prometheus](#) · [Grafana](#)

- ▶ Architected hierarchical 8-agent orchestration: ORACLE (Claude Sonnet 4.6) as master orchestrator synthesizing outputs from 7 concurrent domain-specialist agents (Claude Haiku 4.5) — Revenue, Sales Pipeline, Churn Prevention, Customer Success, Product Intelligence, Growth, and Platform Engineering
- ▶ Implemented raw Anthropic SDK tool-use agentic loops with `Promise.all()` parallel execution; ORACLE synthesizes a daily brief with 15–20 prioritized action items covering MRR, trial pipeline, churn risk, and platform health
- ▶ Engineered full observability stack (Langfuse self-hosted, Prometheus, Grafana, Jaeger, Loki, OTel Collector) via Docker Compose — every LLM call traced at per-agent resolution for latency, token usage, and cost visibility
- ▶ Achieved ~\$0.002 per full run via deliberate model tiering (Sonnet 4.6 for synthesis, Haiku 4.5 for specialist workloads); Inngest 8AM cron for autonomous daily execution; Express.js API for per-agent manual triggers

Selfe Loans

[Flutter](#) · [Riverpod](#) · [Dio](#) · [Firebase](#) · [REST APIs](#)

Production platform with 900+ integrations, KYC flows, encrypted API client, real-time status tracking. Shipped on Play Store.

EE E-Commerce App (UK)

[Flutter](#) · [BLoC](#) · [GraphQL](#) · [Dio](#) · [Clean Architecture](#)

Full checkout module — cart, address, payment, order confirmation with GraphQL APIs and TDD-backed modules.

150+ Health

[Flutter](#) · [Node.js](#) · [Health Connect](#) · [Apple HealthKit](#) · [Firebase](#)

Cross-platform fitness app — smartwatch sync, personalized video content, Google Maps court discovery. Play Store live.

StillsWeb · Srajan AI · Unsync

[Flutter](#) · [AWS S3](#) · [Firebase](#) · [GetX](#) · [WebRTC](#) · [Hive](#)

Cloud gallery (10GB/user, RBAC), AI extension, real-time video/audio/text communication app. Shipped on Play Store.

EDUCATION

B.E. — Mechanical Engineering · Tagore Engineering College, Anna University, Chennai

2014 – 2018
